Grain LNG

Case Study – Development of an Organisational Resilience structure for the Grain LNG Issue

To review current UK wide National Grid policy, strategy, standards and procedures for Resilience within the Company. Using this knowledge develop a suite of policy documents that allow Grain LNG to comply with National Grid resilience policy and strategy requirements.

Solution

Provision of strategic level consultancy to Grain LNG management.
Initial scoping meetings and development of a project plan to create the required project plan.

Development of first draft documentation which included, an overall policy statement with outline strateg governance/management processes, document maintenance and review process, an ongoing training and exercise programme and 'how to' documents for business continuity and emergency planning.
Undertake an awareness raising workshop and subsequent introduction strategy.

Result

Organisational Resilience document suite created.
