Jubail Industrial City

Case Study – To develop Crisis Management processes for a large industrial city area in Saudi Arabia

Issue

To provide resilience expertise and lead a team of resilience practitioners in order to ensure a resilience crisis management plan was instituted.

Solution

To work with the Chief Executive and the Executive Board of the Jubail Industrial City in Saudi Arabia in order to create an organisational resilience governance system to encompass all entities in and around the Industrial City.

Workshops created and undertaken to introduce the design concepts of Crisis Management. Research and development work for the creation of a crisis management centre undertaken including layouts and equipment requirements.

Development work for an area risk assessment modelled on UK practice
Development work for a multi-agency crisis management plan.

Result

Development and institution of an outline multi-entity strategic level, crisis management plan for the whole of Jubail Industrial City.
